

HEXBELL DUMBBELLS

Designed and engineered primarily for the superyacht market, our Hexbell dumbbells form a core part of the new GM Custom range. When you engineer a product for the superyacht world, you have to ensure that the materials and design is tested to be used in the harshest environments, whilst also still looking beautiful. For this reason, we believe these dumbbells will also be a big hit in the commercial gym & hospitality markets, as well as with prime residential customers. These are the only dumbbells on the mainstream market with superyacht grade 316 stainless steel handles.
