

## TECHNOGYM SKILLMILL

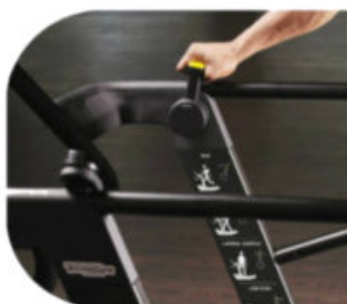

**SKILLMILL uses the unique curved surface to give the most intense workout.**

SKILLMILL was born as a non-motorised product that is activated only with the force of the user. It's not just a treadmill. If the user wants to increase the speed, they must move towards the front platform. The opposite movement by moving to the rear will decelerate speed. The product is designed especially to follow the athlete's rhythm.

As well as its ergonomic design it offers durability and safety. The ideal solution for a sustainable facility, it helps reduce electricity costs and carbon footprint.
